
HTA - - Health Technology Assessment Report

Lumacaftor and ivacaftor combination therapy for cystic fibrosis ? first line (Structured abstract)

Code: HTA-32014000565 **Year:** 2014 **Date:** 2014

Author: NIHR HSC

Study design (if review, criteria of inclusion for studies)

Review, HTA report

List of included studies (3)

TRANSPORT, NCT01807949, VX12-809-104; lumacaftor and ivacaftor vs placebo; phase III. TRAFFIC, NCT01807923, VX12-809-103; lumacaftor and ivacaftor vs placebo; phase III. NCT01931839, VX12-809-105; phase III extension.

Participants

patients aged 12 years and older with cystic fibrosis (CF) who are homozygous for the F508del-CFTR mutation.

Interventions

Lumacaftor is a cystic fibrosis transmembrane conductance regulator (CFTR) corrector and ivacaftor is a CFTR potentiator.

Outcome measures

Primary: Relative change in percent predicted forced expiratory volume in 1 second (FEV1); safety. Secondary: Absolute change in percent predicted FEV1, change in body mass index (BMI), number of pulmonary exacerbations, cystic fibrosis questionnaire (CFQ-R) score, safety.
