

ongoing trials - trial from www.clinicaltrials.gov

Evaluation of the effects of curcumin-piperine in reducing Pseudomonas infection and improving clinical outcome in patients with cystic fibrosis - Pending

Code: IRCT20221229056976N1 **Year:** 2023 **Date:** February 1, 2023

Author:

Study design (if review, criteria of inclusion for studies)

Interventional - Allocation: Randomized|Intervention Model: Parallel Assignment|Masking: None (Open Label)|Primary Purpose: Treatment

Participants

Cystic Fibrosis|Cystic Fibrosis Pulmonary Exacerbation - 6 Years and older (Child, Adult, Older Adult)

Interventions

Drug: Beta-lactam antibiotic|Drug: Aminoglycoside

Outcome measures

Absolute Change in FEV1 % Predicted at Week 4 in Aminoglycoside (AG) Study|Incidence of Adverse Events (AEs) in Aminoglycoside (AG) Study Intervention Arms|Absolute Change in CFRSD-CRIS Score at Week 4 in Aminoglycoside (AG) Study
