

primary studies - published, non RCT

Parents' knowledge of neonatal screening and response to false-positive cystic fibrosis testing.

Code: PM1613113

Year: 1992 **Date:** 1992

Author: Tluczek A

Participants

18 adults with cystic fibrosis

Interventions

exercise, physiotherapy, and combinations of exercise and physiotherapy

Outcome measures

sputum expectoration

Main results

Any treatment which included physiotherapy either alone or in combination with exercise produced a significantly higher sputum weight during treatment time than did exercise alone (P
