## Point of care lung ultrasound in preschool children with cystic fibrosis: a case-controlled, prospective, pilot study.

**Code:** PM38240960

**Year:** 2024 **Date:**

**Author:** Crispino AA

### Study design (if review, criteria of inclusion for studies)

Case-control study

### Participants

Asymptomatic preschool patients affected by CF. A total of 70 enrolled patients (20 patients affected by CF, 50 healthy controls) aged from 3 to 6 years. All included patients were without intercurrent lung problems and without antibiotic therapy in the last 30 days.

### Interventions

Lung ultrasound. For each patient a lung Point of Care Ultrasound (POCUS) of lung was performed.

### Outcome measures

Lung ultrasound findings

### Main results

B linesâ€‰‰

### Authors' conclusions

The presence of multiple subpleural pulmonary consolidationsâ€‰‰
