
HTA - - Health Technology Assessment Report

Vitamin D for glycemic control: A multicenter, double-blind, randomized, placebo-controlled trial in adults with cystic fibrosis.

Code: PM38343807

Year: 2024 **Date:**

Author: Sivapiromrat AK

Study design (if review, criteria of inclusion for studies)

Project of Health technology assessment

Participants

General population. Adults of reproductive age

Interventions

Genetic testing for cystic fibrosis for CF carrier screening

Outcome measures

The impacts of offering a cystic fibrosis (CF) carrier screening to the general population

Main results

i) a lack of robust and updated data; ii) a return on investment up to six years from the screening's introduction, despite important economic and organizational efforts; iii) a general positive attitude of healthcare professionals, people with CF, families and general population; iv) possible issues related to the social impact.
