
primary studies - published RCT

Single- and multiple-dose-response relationships of beta-carotene in cystic fibrosis.

Code: PM7658286

Year: 1995 **Date:** 1995

Author: Hornick DN

Study design (if review, criteria of inclusion for studies)

single- and multiple-dose studies of beta-carotene supplementation in patients with CF

Interventions

beta-carotene supplementation

Outcome measures

beta-carotene concentrations, beta-carotene clearance

Main results

Dose-proportional increases in beta-carotene concentrations were found, although clearance was independent of dose.

Authors' conclusions

Large doses of beta-carotene were necessary to achieve normal plasma levels.
