
primary studies - published RCT

Effect of supplemental oxygen on supramaximal exercise performance and recovery in cystic fibrosis.

Code: PM9375333

Year: 1997 **Date:** 1997

Author: Shah AR

Study design (if review, criteria of inclusion for studies)

Randomized controlled cross-over trial, single center. Single blind (participants).

Participants

17 people with CF, mean age 25 years, 9 male and 8 female. 17 people in control group, mean age 25 years, 10 male and 7 female. States each participant performed exercise before and after O₂.

Interventions

2 consecutive supramaximal exercise tests with recovery FiO₂ 0.21 or 0.30, then repeat exercise.

Outcome measures

VO₂max, HR, VE, SaO₂, peak work, exercise time, AT, subsequent work performance.
